

CLAIMS

I claim:

1. A conical-shaped container for containing one of a liquid and a semi-liquid substance, the container comprising:
 - a conical main body formed of a collapsible material; and
 - a rectangularly-shaped rigid tab attached to a top of the conical main body and including a top region formed to hold the top of the conical main body and a bottom region, wherein
 - the bottom region is more rigid than the top region,
 - a notch is formed in a transitional section formed between the bottom region and the top region,
 - the top of the conical main body is formed of a different material than a bottom of the conical main body, and
 - the transitional section of the rectangularly-shaped rigid tab is formed as a zone of weakness to enable a tearing of the top region holding the top of the conical main body from the bottom region, thereby opening the conical main body.
2. The container as claimed in claim 1, wherein the different material forming the top of the conical main body is a foil-like material so that the foil-like material is resealable by pressing the foil-like material.
3. The container as claimed in claim 1, wherein the transitional section is indented to form the zone of weakness.

4. The container as claimed in claim 1, wherein the transitional section is perforated to form the zone of weakness.

5. The container as claimed in claim 1, wherein walls of the top of the conical main body are indented at a same height as the transitional section.

6. The container as claimed in claim 1, further comprising a thread attached to the transitional section and the top of the conical main body.

7. The container as claimed in claim 1, wherein the conical main body is formed of a layer of one of paper, plastic, tin foil, metal, and a combination thereof.
